fix this so that is is connected to the ai_server class

```
ChatBotGUI(QMainWindow):
    def __init__(self):
        super().__init__()
        self.ai_model = AdvancedAI()  # Changed to ai_model
        self.web_crawler = WebCrawler(save_dir=DATA_DIR)
        self.conversation = []
        self.init_ui()
        self.schedule_full_training()

        # Connect crawler and training finished signals

self.web_crawler.crawling_finished.connect(self.crawling_finished)

self.ai_model.training_finished.connect(self.training_finished)

        # Connect to AI server
        self.client_socket = socket.socket(socket.AF_INET,
socket.SOCK_STREAM)
        try:
            self.client_socket.connect(
                ("localhost", 5005)
            )  # Connect to the server
            logging.info("Connected to AI Server.")
        except Exception as e:
            logging.error(f"Error connecting to AI Server: {e}")

    def init_ui(self):
        self.setWindowTitle("Self-Learning AI")
        self.setGeometry(100, 100, 1200, 800)
        central_widget = QWidget()
```
